

Protect your infrastructure and your Client's data by complying with PCI Data Security Standard

A2SECURE, being a Qualified Security Assessor firm, certified by the PCI Security Standards Council and holding over ten years of experience in the field, constitutes the flawless partner to walk you through the path to secure payment services and solutions. Build your client's full trust in your service.

PCI-DSS Data Security Standard

PCI-DSS applies to every organization that stores, processes or transmits third-party payment card data. The Standard focuses on six key security domains, allotted in twelve core requirements.

The Standard enforces the organizations to build, maintain and monitor a secure network to protect the cardholder data, along with an information security and vulnerability management program encompassing technology, business and working procedures, and people.

Both merchants and service providers dealing with payment cards information, regardless of their size or their trade volume, must attest compliance on an annual basis. Otherwise they could face legal and economic consequences varying from fines to prohibition of transacting with payment cards.

A2SECURE: your PCI-DSS Partner

The complexity of regulations and requirements is constantly increasing. There could be many different crossroads to reach the goals. A2SECURE works hand in hand with you to focus on your appropriate compliance level, whilst pinpointing and sorting out any risks or threats that could jeopardize your business.

- Highly qualified and QSA certified experts to gain in-depth insight of your background, environment and resources.
- Ongoing support to meet the cybersecurity level, reduce the scope, and aim for peace of mind.
- Wide range of own and third-party PCI-DSS services and solutions to easily reach compliance and mitigate risks.

Guiding every single step to compliance

A2SECURE methodology goes further than any conventional PCI assessment, whilst maintaining the imperative GAP analysis, vulnerability identification or remediation plan.

Moreover, A2SECURE puts the accent in getting to know you and your business. Don't only parse with off-the-shelf, standardized settlements. We focus on your singularity to unveil the most suitable approach to put together your compliance through a smooth transition.

Benefits

- ▶ Protecting the organizational information systems, and mitigating the risk of a data-breach
- ▶ Dealing with the whole compliance challenge with confidence, always counting on seasoned professionals
- ▶ Setting clear limits by reducing the PCI-DSS scope, and therefore the costs
- ▶ Achieving compliance without prejudice for your business operation
- ▶ Building up the trust of your clients and raising confidence in the transactions and payment methods you offer

Solutions for PCI-DSS compliance

A2SECURE adapts to every client and its environment to reach a common goal - complying with the PCI-DSS regulation.

In order to do that, we offer solutions focusing on the needs of every client uniting compliance and security:

PCI Gap Assessment

Your current environment is evaluated according to the PCI-DSS standards through the review of a combination of the network architecture, documentation, policies and procedures and the analysis of the configurations throughout your system.

The GAP states the likelihood of breaches and any chance for improvement to comply with the requirements of PCI-DSS

PCI ASV Scan / Internal Scan

Vulnerability Management Services. A2SECURE performs and manages the necessary quarterly vulnerability scanning to comply with PCI-DSS, providing solutions for every found vulnerability and support in remediation.

PCI Penetration Testing

Ethical hacking activities focused on giving coverage to the 11th Requirement of the PCI-DSS regulation. This is, intrusion internal and external tests together with the segmentation of the environment.

Secure Development Program

Training the developers is the most effective way to reduce cybersecurity risks. The developers must be trained yearly in secure development to minimize vulnerabilities in the applications. A2SECURE provides presential or online training within development environments and practical exercises such as CTF to gain efficiency through training and regulation compliance.

Cybersecurity and PCI awareness

Trainings in cybersecurity and PCI-DSS to comply with the 12th Requirement. The courses are delivered on-line providing the employees with the tools and best security practices and handling of payment card data. Controlled phishing attacks are performed to test the effectivity of the trainings.

PCI On-site Audit and Compliance

As a QSA company, A2SECURE performs audits yearly to evaluate the level of compliance of PCI-DSS of our customers. When the evaluation is finished, A2SECURE provides its customers with the final AoC (Assessment of Compliance) and the RoC (Report on Compliance)

Uniting Compliance and Security

A2SECURE works to enhance security and compliance.

Our methodology is based on adapting and enforcing the security of our customers not only to reach the point of optimum level of compliance but to maintain the acquired level at a daily basis. Our methodology is not only focused on attaining the adequacy to the compliance requirements but also on working in a comprehensive manner in such a way that we can ensure coherence among personnel, processes and technology to be able to reach the goal.

PCI Project, every Client is Unique

There is no such a thing as a large or small client. There is only one need - complying with the regulation and a customized process for every customer. A2SECURE counts with a vast experience in every type of customer and business, wherever there is an exchange of payment card details, merchants or service providers, in any field.

Key Points

- ▶ Customized projects, focused on compliance on PCI-DSS environment of the customers
Protect the assets
- ▶ Reduction of the risk of data leak and regulation compliance
Data leak Prevention
- ▶ Providing a differential value with respect to your competitors increasing your security levels in accordance to a worldwide recognized standard
Differential value
